

**Someday,
there'll be
cures for all
cancers.**

**What will
it take?**

Professor Wong Sek Man & PhD student Mr Ren Yupeng have developed a novel drug delivery platform using a hibiscus virus to carry anti-cancer drugs.

At NUS, we're working on a diverse range of research initiatives to treat illnesses and improve lives. They include research on curative foods and delivery systems for anti-cancer drugs. Our multi-disciplinary, cross-cultural approach challenges students to transform the way they think and do things for a better tomorrow.

Imagination & Courage
